MANUTENZIONE PELLE

ITALIALOUNGE

Le nostre pelli sono scelte con cura e qualità.
Essendo un prodotto naturale mantiene inalterate le sue caratteristiche: pertanto piccoli segni lasciati da eventuali cicatrici, punture di insetti, leggere smagliature, rughe, differenze di grana e variazioni di tonalità sono da considerarsi dei pregi e garanzia di un prodotto naturale.

La pelle è sensibile alle variazioni di temperatura, alle trazioni e agli stiramenti.
Il calore e la luce possono seccare la pelle e sbiadire i colori, evitare quindi l'esposizione diretta ai raggi solari e la vicinanza a **fonti di calore intenso** (camino, radiatore etc.). **Attenzione a rigature** di oggetti appuntiti o fibbie di vestiti e graffi di animali domestici.

MANUTENZIONE
Ogni tre mesi eseguire le operazioni di pulitura e protezione.
Con la pulitura eliminare le polveri, lo sporco e le macchie per ottenere una superficie pulita. Con la protezione attraverso una crema specifica si nutre la pelle per proteggerla dal disseccamento, dalle macchie, dallo strofinamento e decolorazione della luce. Evitare gli spray con solventi e prodotti a base di olio o materia grassa.

SPOLVERATURA
Per la manutenzione regolare del divano spolverare settimanalmente la superficie della pelle con un panno umido o con un'aspirapolvere a bassa potenza e provvista di un bocchettone a spazzola morbida.

SMACCHIATURA DELLA PELLE
Non effettuare operazioni di pulitura e smacchiatura senza **utilizzare prodotti idonei.**
Agire dopo aver fatto una prova su una parte poco visibile del vostro divano per testare il prodotto ed attendere qualche ora.
Rimuovere immediatamente la sostanza tamponando con un panno o della carta assorbente bianca, poi pulire con un panno imbevuto di acqua e asciugare con un panno asciutto.
Non bisogna **mai strofinare o effettuare una pressione eccessiva** perchè la superficie potrebbe rovinarsi.

PELLI SMERIGLIATE
Vengono sottoposte a speciali trattamenti per attenuarne le imperfezioni: la superficie si presenta regolare, morbida al tatto e resistente.
Per la smacchiatura utilizzare solo acqua leggermente saponata e prodotti dedicati.

PELLI RETTIFICATE
Vengono sottoposte a speciali trattamenti che permettono di eliminare alcune imperfezioni: conservano un aspetto naturale, la grana non è perfettamente uniforme e la superficie particolarmente morbida.
Per la smacchiatura utilizzare solo acqua leggermente saponata e prodotti dedicati.

PELLI PIENO FIORE E SEMI ANILINA
Non subiscono smerigliatura per cui la loro grana è naturale e non uniforme, possono presentare piccole cicatrici e rughe a garanzia della loro naturalità.
Vengono trattate lievemente con prodotti protettivi per mantenere il tatto morbido e setoso.
Per questi tipi di pelle utilizzare prodotti specifici, spolverare e smacchiare.
Per la smacchiatura utilizzare solo prodotti dedicati.

PELLI ANILINE
Non subiscono un processo di rifinitura in superficie per cui l'aspetto originale è inalterato. Non subiscono trattamenti coprenti e protettivi per cui sono molto vulnerabili e acquisiscono col tempo un aspetto "vissuto".
Questo tipo di pelle si può solo spolverare.

NUBUCK o SCAMOSCIATO
E' una pelle anilina con la superficie smerigliata così da ottenere un aspetto vellutato. E' molto morbida, calda e naturale. Soffice e traspirante.
Non subiscono alcun processo di rifinitura della superficie per cui sono delicate.
Questo tipo di pelle si può solo spolverare.

LEATHER MAINTENANCE

ITALIALOUNGE

Our leathers are chosen with care and quality.
Being a natural product it maintains its characteristics unchanged: therefore small marks left by scars, insect bites, slight stretch marks, wrinkles, grain differences and tonal variations have to be considered guarantee of a natural product.

Leather is sensitive to the temperature, traction and stretching.
Heat and light can dry the skin and fade colours, so avoid direct exposure to sunlight and proximity to **sources of intense heat** (chimneys, radiators etc.). **Beware of sharpened** objects or clothing buckles and scratches of domestic animals.

MAINTENANCE
Perform cleaning and protection operations every three months.
With cleaning, remove dust, dirt and stains to get one clean surface. With protection through a specific cream that nourishes leather to protect it from drying out, from stains, from rubbing e light discoloration. Avoid sprays with solvents and oil-based products containing fat.

DUSTING
For regular maintenance of the sofa, dust the surface weekly of the leather with a damp cloth or with a low-power vacuum cleaner equipped with a soft brush nozzle.

LEATHER STAINS-REMOVAL
Carry out leather stain removal and cleaning using **only suitable products**.
Start testing the materials you use a low visible part of your sofa and wait a few hours. Immediately remove the substance by dabbing with a cloth or paper white absorbent, then wipe with a cloth soaked in water and dry with a dry cloth. **Never rub or apply excessive pressure** because the surfaces might be damaged.

SANDED LEATHERS
They are subjected to special treatments to mitigate their imperfections: the surface is regular, soft to touch and resistant. For stains removal use mild soapy water and dedicated products.

RECTIFIED LEATHERS
They are subjected to special treatments that allow you to eliminate some imperfections: they retain a natural appearance, the grain is not perfectly uniform and particularly soft surface. For spotting use only mild soapy water and dedicated products.

TOP GRAINS AND SEMI ANILINE
They do not undergo grinding, so their grain is natural and not uniform, they can present small scars and wrinkles to guarantee their naturalness.
They are treated lightly with protective products to maintain the touch soft and silky. For these types of leathers use specific products, to remove dust and stains.
This kind of leather can be dusted, but not washed.

ANILINE LEATHER
They do not undergo a surface finishing process so the original appearance is unaffected. They do not undergo any covering and protective treatments for which they are very vulnerable and acquire a "lived" aspect over time.
This type of leather can only be dusted.

NUBUCK or SUEDE
It is an aniline leather with a frosted surface so as to obtain an appearance velvety. It is very soft, warm and natural. Soft and breathable. They do not undergo any surface finishing process so they are delicate.
